AMANORSAC STUDIO

PRODUCT ONE-PAGE BRIEF · INTERNAL PRODUCT ANALYSIS · NOT MARKETING

STATUS: IN DEVELOPMENT

Repo **JM VST** · **apps/amanorsac-studio** · v1.0.0
Generated 2026-09-03 from the repository

CATEGORY	**Desktop application (Electron)** — sampling tool + encrypted library packer. **Not a plugin**: no VST3/AU/AAX build exists for this product.
ONE SENTENCE	Records a real instrument note-by-note into a multi-velocity, round-robin sampled instrument, then seals it into an encrypted **.aofas** library only Amanorsac apps can open.
PURPOSE	Turn a physical or hardware instrument into a playable, protected library for the Amanorsac stage player.
USERS	Internal — one operator sampling their own instruments. No multi-user or customer-facing mode.
LINEAGE	Deliberate fork of JM Capture in the same repo: own copy of the source, own brand and palette. JM Capture is untouched.

Main interface — Sessions home, captured 2026-09-03 from the built v1.0.0 renderer (empty chassis band cropped; pixels otherwise untouched). No prior screenshot of this product existed: the 38 images in *apps/capture/screenshots* are the gold-themed JM Capture and do not represent it.

WHAT IT DOES

MAIN FUNCTION	Guided or automatic multisampling → a **.jmi** bundle (instrument.json + presets + 24-bit WAVs) → sealed **.aofas** library.
FEATURES	**Guided capture** (per-note coach, arc/LED meters, take review) · **Auto mode** (drives an external instrument over MIDI, records via audio loopback, patch queue) · **Audition** (on-screen keyboard, loop nudge editor, preset lanes) · **FX rack** of 12 units, audition-only and non-destructive · **Import** Yamaha Montage **.X7L** → .jmi · **Export** writes bundle + zip + sealed .aofas.
WORKFLOW	New session → wizard (name · world · sound type · guided/auto · devices · sampling plan) → capture takes → audition, trim, loop → export → sealed library lands in *Documents/Amanorsac Studio/Library*.
DISTINCTIVE	The **.aofas** container: 64 KiB individually authenticated chunks, so a player streams and decrypts only the part of a sample it needs. Capture app and player share one authenticated format. UI is a photoreal hardware rack, not flat widgets.

VISUAL / UX IDENTITY (AS BUILT)

070A12 · 0C1220 · 3D8BFF · 7FB6FF · 35D3F2

PALETTE	Chassis #070A12, panel #0C1220, raised #121B2E, recess #04060C; accent #3D8BFF, lit edge #7FB6FF, cyan #35D3F2, pressed #1A4FB0; text #E9F0FA, dim #8A9BB8. Shared with the Sanctuary stage app.
SURFACES	Dark navy "stage console at night": micro-weave texture, vignette, photoreal nine-sliced metal plates with screws and rack corners.
TYPE	Display Bahnschrift SemiBold Condensed → Oswald / Barlow Condensed, uppercase, wide tracking. Body Inter. Fetched from the Google Fonts CDN at runtime.
CONTROLS	**Buttons** photoreal plate art, up/down states, engaged = filled blue pill · **Knobs** photoreal rotary, ±135°, value arc, non-rotating engraved motif, vertical drag + double-click reset · **Dropdowns** custom plaque listbox with tick · **Tabs** segmented nav strip · **Meters** photoreal LED strip, LED and arc · **Panels** nine-sliced cards · **No faders or sliders exist**; loop edits use nudge buttons.
STATES	Hover, pressed, engaged, disabled and focus-visible are styled; selection is shown by a listbox tick.
MOTION	Deliberately minimal: 11 CSS transitions, 80–240 ms, colour/border/opacity only. No keyframe animation anywhere.
CHARACTER	Photoreal hardware rack; cool, instrument-like, feedback by light rather than warmth.

TECHNICAL SNAPSHOT

STACK	Electron 33 · TypeScript · React 18 · Vite 6 · Zustand. Renderer is browser-side; **all disk I/O is in the main process**.
AUDIO	Web Audio at a fixed 48 kHz; a custom **AudioWorklet** capture node feeds recording and live peak metering. Web MIDI drives Auto mode. Samples written as 24-bit WAV.
DSP	Capture: input → worklet → peak meter → session WAV. Audition adds a 12-unit FX rack (chorus, EQ, delays, phaser, flanger, preamp, compressor, reverbs, widener, tremolo). FX are preset parameters — never printed into samples.
FORMATS	Reads/writes **.jmi**; writes **.aofas** (ChaCha20-Poly1305 + HKDF-SHA256, 64 KiB authenticated chunks); imports Yamaha **.X7L**.
PLATFORMS	**Windows**: NSIS installer built and launch-tested (84 MB, x64). macOS dmg/zip configured but **never built**. No Linux target.
KEYS	Sealing needs a studio key file kept outside the repository and gitignored by name. If it is absent the export still completes and the UI reports that sealing failed.
LICENSING	**None.** No account, activation, trial or entitlement check exists.
INSTALL	electron-builder NSIS with a generated brand icon. **Unsigned** — SmartScreen warns. **No auto-updater.**
EXTERNAL	Google Fonts CDN at runtime. No backend, telemetry, analytics or crash reporting; no other network calls.
TESTS	208 automated tests in-app, plus 12 for the .aofas container (round-trip and tamper).

Built vs. planned. BUILT: capture, audition, FX, X7L import, export, .aofas sealing, Windows installer, one 200 MB sealed piano library; a dependency-free C++17 .aofas reader header plus its RFC-vector test now exists in *packages/aofas-format/cpp*. NOT YET: **no player integrates that reader** — the Sanctuary and Signature stage apps still load plain .jmi folders; per-customer licensed mode (a reserved format flag); macOS builds; code signing.

AMANORSAC STANDARDIZATION NOTES

KEEP — PRODUCT-SPECIFIC

- Photoreal hardware kit, engraved-motif knobs
- Guided per-note capture coach and plan wizard
- Auto mode MIDI-out + audio-loopback rig
- FX faceplate and meter LED colours (identity and safety, not decoration)

STANDARDIZE — COMPANY-WIDE

- Blue palette and design tokens (already shared with Sanctuary; token keys are still named "gold" and want one rename)
- The **as-** component set: Panel, PlateButton, Segmented, Listbox, Knob, KitMeter
- Settings / devices panel
- **.aofas** as the company container, with its error vocabulary
- Data paths under *Documents/Amanorsac Studio*
- Brand shield (currently a self-declared placeholder) and icon pipeline

MISSING — COMPANY INFRASTRUCTURE

- Amanorsac account integration
- Licensing / activation / entitlements
- Preset browser (presets are files; no browser UI)
- Auto-updater; code signing and notarization
- About screen; legal, privacy and licence links
- Accessibility pass — some ARIA roles exist, but no keyboard navigation or contrast audit
- Crash reporting; telemetry consent
- Standardized settings schema; offline-bundled fonts
- Localization
